Instructions for Gate Opener
Single Button Entry Transmitter

You can have as many transmitters as you want for family and guests to open your gate. The DIP switches in all the transmitters for a particular gate opener must be set the same.

Instructions for adding additional entry transmitter(s)

If you already have a transmitter that operates your gate and are simply adding an additional transmitter, set the DIP switches in the new transmitter to match the DIP switches in your original transmitter, reassemble the transmitters and you are done.

IMPORTANT:
If you change the DIP switches in the original transmitter refer to Program New Transmitter Setting to Gate Opener’s Memory section below.

Instructions for replacing a lost entry transmitter

If you are replacing a lost transmitter and you know or have your original transmitter’s DIP switch setting written down, set the new transmitter DIP switches to that setting and it is ready to activate your gate opener.

If you don’t know the DIP switch setting from your original transmitter, you will need to select a new setting.

Personalize your Transmitter Setting
There are nine (9) DIP switches, each of which can be placed in three different positions (+, 0, -). DO NOT set all switches in the same position, such as all +, all -, or all zeros.

Program New Transmitter Setting to Gate Opener’s Memory
Some gate openers are programmed with a LEARN REMOTE or LEARN TRANSMITTER button and some with the ON/OFF switch. Refer to your Gate Opener’s Installation Manual for instructions on how to program the transmitter to your gate opener.

NOTE: If the red light on the transmitter is dim or flickers when the transmitter button is pushed, the transmitter battery may be weak. Replace when necessary with a A23S 12 Volt battery.

FCC Regulation: This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

Warning: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Reassemble the transmitter when finished
Instructions for Gate Opener

Two Button Entry Transmitter

The two button transmitter is used for the remote control of two gate openers or a gate opener and a garage door opener. A GTO Universal Receiver (RB709U-NB) is required for use with garage door openers.

Instructions for adding additional entry transmitter(s)

If you already have a Two Button transmitter that operates your gates and are simply adding an additional Two Button transmitter, set the DIP switches in the new transmitter to match the DIP switches in your original transmitter, reassemble the transmitters and you are done.

If you are replacing a lost entry transmitter and you know or have your original transmitter’s DIP switch setting written down, set the new transmitter DIP switches to that setting and it is ready to activate your gate opener.

If you don’t know the DIP switch setting from your original transmitter, you will need to select a new setting.

Personalize your Transmitter Setting

There are eight (8) DIP switches, each of which can be placed in three different positions (+, 0, -). DO NOT set all switches in the same position, such as all +, all 0, or all zeros.

Program New Transmitter Setting to Gate Opener’s Memory

Some gate openers are programmed with a LEARN REMOTE or LEARN TRANSMITTER button and some with the ON/OFF switch. Refer to your Gate Opener’s or Universal Receiver’s Installation Manual for instructions on how to program the transmitter to that device.

NOTE: If the red light on the transmitter is dim or flickers when the transmitter button is pushed, the transmitter battery may be weak. Replace when necessary with a A23S 12 Volt battery.

ONE YEAR LIMITED WARRANTY

Your GTO® Accessory is warranted by the manufacturer against defects in materials and manufacturesmanship for a period of one (1) year from date of purchase, provided the recommended installation procedures have been followed.

In the event of product failure due to defective material or manufacturesmanship, the original purchaser, at GTO’s discretion, may either repair or replace the product(s) at no charge to the original purchaser.
